PROFILE

I am a dedicated Software Developer with 2 years of experience in full-stack development. I thrive in dynamic environments, applying my problem-solving skills and passion for technology to deliver high-quality solutions. My experience includes leading the development of recruitment applications, streamlining processes, and improving user experiences. I have worked with VB.NET, ASP.NET MVC, PHP, C#, MySQL, and GitHub, and I am committed to continuous learning and innovation in software development.

WORK EXPERIENCE

Software Developer

Gruppo EMS, Inc.

2022 – 2024

Role Overview:

As a dedicated Software Developer at Gruppo EMS, I have been responsible for leading key digital transformation initiatives within the organization. My role involves full-stack development, designing and implementing innovative software solutions, and collaborating closely with cross-functional teams to ensure the successful delivery of projects that align with the company's strategic goals.

Key Responsibilities:

First Project:

- Developed an Applicant Tracking System to provide a paperless transaction with potential employees and to speed up the hiring process. Using ASP.NET MVC.

Lead Developer Role:

- Appointed as the lead developer for Skills Hub, a recruitment application developed using ASP.NET MVC. The application streamlines the hiring process by collecting and matching the skills listed in job postings with the skills provided by applicants in their profiles, ensuring an efficient and accurate candidate selection process. Responsible for managing the entire project lifecycle, from design to deployment.

Electronic Gate Pass System:

- Developed an NFC-based electronic gate pass system to completely eliminate paper usage for employee and visitor access. This project utilized VB.NET for NFC scanning and ASP.NET for data submission, ensuring seamless and secure access. The system promoted both efficiency and sustainability by leveraging modern Near Field Communication (NFC) technology.

User Interface Design:

- Designed and implemented user-friendly graphical user interfaces (GUIs) that focused on enhancing the overall user experience. Utilized front-end web frameworks and associated templates/tools to accelerate the development process while ensuring a modern and responsive user experience.

Database Development:

- Designed scalable and efficient database schemas and table structures to ensure smooth data retrieval and high system performance. Focused on data integrity, minimizing redundancy, and ensuring secure storage of sensitive information.

Website Maintenance and Support:

- Provided ongoing maintenance and support for the ATS and other key systems, such as the Training Management System and various company websites. Monitored system performance, managed regular updates, and implemented new features as required to enhance functionality and meet evolving business needs. Ensured the highest levels of uptime and user satisfaction by promptly addressing technical issues and performance bottlenecks.
